## Understanding Oracle Database 11g RAC: An Overview

Oracle Database 11g RAC (Real Application Clusters) is a clustered database solution that allows multiple servers?referred to as nodes?to access a single database simultaneously. This architecture ensures high availability and scalability, making it ideal for mission-critical applications.

### Core Principles of Oracle RAC

- Shared Storage: All nodes in the RAC environment access the same physical database files stored on shared storage systems.
- Clustered Nodes: Multiple servers operate in tandem, each capable of processing database requests, which enables load distribution.
- Cache Fusion: A proprietary interconnect protocol that maintains cache coherency across nodes, ensuring data consistency and high performance.
- Fault Tolerance: If one node fails, others continue to operate without service disruption, ensuring continuous availability.
