Understanding the Focus of Algebra 1 Lesson 9.6

Core Topics Covered

Lesson 9.6 typically centers around solving multi-step equations, working with inequalities, and understanding the properties of algebraic expressions. The objectives include:

- Solving linear equations with variables on both sides
- Applying the distributive property
- Combining like terms effectively
- Solving inequalities and graphing their solutions
- Word problems involving algebraic expressions

Importance of Practice and Answers

Practicing problems with correct answers helps reinforce understanding, identify areas for improvement, and build confidence. By reviewing practice answers, students can understand common mistakes and learn efficient strategies for solving similar problems.

Key Concepts in Algebra 1 Lesson 9.6

Solving Multi-Step Equations

Multi-step equations require several operations to isolate the variable. The process often involves:

- Using the distributive property to expand expressions
- Combining like terms on each side of the equation
- Adding or subtracting to move variables and constants across the equal sign
- Multiplying or dividing to solve for the variable

Working with Inequalities

Inequalities are similar to equations but require special attention when multiplying or dividing by negative numbers, as it reverses the inequality sign. Graphing inequalities involves shading regions

on a number line or coordinate plane.

Word Problems and Application

Real-world problems often translate into algebraic expressions or equations. Setting up these problems correctly is crucial before solving.

Sample Practice Problems with Answers and Explanations

Below are typical problems from Lesson 9.6, along with detailed solutions to help you understand the reasoning process.

Problem 1: Solve for x

Equation: $3(x + 4) - 2 = 2x + 5$

Solution:

- Apply the distributive property:

$$3x + 12 - 2 = 2x + 5$$

- Combine like terms:

$$3x + 10 = 2x + 5$$

- Subtract $2x$ from both sides:

$$3x - 2x + 10 = 5$$

$$x + 10 = 5$$

- Subtract 10 from both sides:

$$x = 5 - 10$$

$$x = -5$$

Answer: $x = -5$

Problem 2: Solve the inequality

Inequality: $4 - 2x > 10$

Solution:

- Subtract 4 from both sides:

$$-2x > 6$$

- Divide both sides by -2 (remember to reverse the inequality sign):

x

Answer: x

Problem 3: Word problem

Problem: A rectangle has a length that is 3 meters longer than its width. If the perimeter is 26 meters, what are the dimensions of the rectangle?

Solution:

Let w = width, then length = $w + 3$

Perimeter $P = 2(\text{length} + \text{width})$:

$$26 = 2(w + (w + 3))$$

$$26 = 2(2w + 3)$$

$$26 = 4w + 6$$

Subtract 6 from both sides:

$$20 = 4w$$

Divide both sides by 4:

$$w = 5$$

Calculate length:

$$\text{length} = w + 3 = 5 + 3 = 8$$

Answer: Width = 5 meters, Length = 8 meters

Strategies for Using Practice Answers Effectively
