Understanding Basic Solid Shapes

Common Solid Shapes in Form 3 Curriculum

Solid geometry exercises often begin with familiar shapes, which include:

- Prisms (e.g., rectangular and triangular prisms)
- Cylinders
- Pyramids (square-based and triangular-based)
- Cones
- Spheres

Understanding the properties of these shapes, such as faces, edges, vertices, and symmetry, is essential for solving related problems.

Properties of Solid Shapes

Each solid shape has unique features:

- **Prisms:** Consist of two congruent parallel bases connected by rectangular faces.
- **Cylinders:** Have circular bases connected by a curved surface.
- **Pyramids:** Have a polygonal base and triangular faces converging to a common vertex.

- **Cones:** Have a circular base and a curved surface tapering to a point called the apex.

- Volume = $\pi r^2 h$

- Pyramid (square base):

- Surface Area = base area + sum of lateral areas
- Volume = $(1/3) \times \text{base area} \times \text{height}$

- Cone:

- Surface Area = $\pi r(l + r)$, where l is slant height
- Volume = $(1/3)\pi r^2 h$
