Diagnosing Common Kenmore 110 Issues

Effective repair begins with accurate diagnosis. The following sections provide detailed diagnostic steps for typical problems.

1. Washer Won't Fill with Water

Diagnostic Steps:

- Check the water supply: Ensure both hot and cold water valves are open.
- Inspect inlet hoses: Look for kinks, clogs, or leaks.
- Test the water inlet valve: Use a multimeter to verify electrical continuity. Replace if faulty.
- Examine the lid switch: Since the washer won't operate if the lid switch is defective, test it for continuity when the lid is closed. Replace if malfunctioning.

- Test the lid switch: If the switch isn't engaging, the washer may not spin due to safety interlock.
- Inspect the drive belt: Some models have a belt-driven transmission; check for cracks or looseness.
- Evaluate the motor coupling: Worn or broken couplings prevent spinning; replace if necessary.
- Check the timer control: Faulty timers can prevent the spin cycle from starting; test with a multimeter.

3. The Washer Leaks Water

Diagnostic Steps:

- Inspect door seals or tub seals: Look for tears, cracks, or buildup that can cause leaks.
- Check drain hose connections: Tighten fittings and clear blockages.
- Verify water level: Overfilling can cause leaks; adjust fill levels if adjustable.
- Test the water inlet valve: A damaged valve may leak internally; replace if needed.

4. Excess Noise During Operation

Diagnostic Steps:

- Examine the drum bearings: Worn bearings produce grinding sounds; replace if necessary.
- Check for foreign objects: Coins or debris can be caught in the agitator or pump.
- Inspect the suspension components: Worn shocks or supports can cause banging.
- Assess the drum and motor alignment: Misalignment can lead to unusual noises.
