Fundamental Principles of Finance

Time Value of Money (TVM)

The concept of the time value of money is central to finance. It states that a dollar today is worth more than a dollar in the future due to its potential earning capacity. The basic idea is that money can earn interest, so the sooner you receive money, the more valuable it is.

- **Present Value (PV):** The current worth of a future sum of money discounted at a specific rate.
- **Future Value (FV):** The value of a current sum of money projected into the future based on a certain interest rate.
- **Key formulas:** PV and FV calculations are foundational in financial decision-making, investment analysis, and loan amortization.

Risk and Return

Understanding the relationship between risk and return is vital. Generally, higher returns are associated with higher risks.

- **Risk:** The chance that an investment's actual return will differ from the expected return.
- **Return:** The profit or loss from an investment over a period.
- **Risk premium:** The additional return expected for taking on additional risk.

Financial Markets and Institutions

The book emphasizes the role of financial markets in facilitating the flow of funds between savers and borrowers.

- **Primary markets:** Where new securities are issued.
- **Secondary markets:** Where existing securities are traded among investors.
- **Financial institutions:** Banks, insurance companies, and investment firms that facilitate financial transactions.

- **Profitability Ratios:** Assess the company's ability to generate profit (e.g., return on assets, return on equity).

- **Leverage Ratios:** Indicate the level of debt relative to equity (e.g., debt-to-equity ratio).

Budgeting and Financial Planning

Effective financial planning involves setting goals, preparing budgets, and forecasting future financial performance.

- **Budgeting:** Creating a plan for income and expenses to achieve financial goals.
- **Forecasting:** Projecting future financial outcomes based on historical data and assumptions.
- **Variance analysis:** Comparing actual results to budgeted figures to manage performance.

- **Futures:** Agreements to buy or sell an asset at a predetermined future date and price.
- **Hedging strategies:** Using derivatives to protect against adverse price movements.

Capital Budgeting
