- Sand edges to ensure tight fit and ease of bending

4. Laying the Strips

This is the core of the build process.

- Apply a thin layer of epoxy or a release agent to the form
- Start from the keel, applying strips along the form, securing with clamps or staples
- Work systematically outward, ensuring each strip conforms to the shape
- Use heat (e.g., heat gun) if necessary to bend strips smoothly

5. Bonding and Reinforcing

Ensuring the hull's integrity is critical.

- Apply epoxy resin to each strip as you work
- Use fiberglass cloth over the entire hull for reinforcement
- Apply additional epoxy layers to saturate the fiberglass and ensure waterproofing

6. Removing the Form and Finishing

Once the hull is cured and reinforced:

- Carefully remove the form and stiffeners
- Sand the hull smoothly, paying attention to edges and transitions
- Fill any gaps or imperfections with epoxy putty or filler

7. Applying the Finish

The final aesthetic and protective layer.
