Introduction to Optimization in Operations Research

Operations research (OR) is a discipline dedicated to the application of analytical methods to aid decision-making. Within OR, optimization serves as the core technique for finding the most effective solutions based on well-defined objectives. Whether the goal is minimizing costs, maximizing profits, or balancing multiple criteria, optimization provides a structured approach to tackle these problems systematically.

Optimization problems in OR are typically modeled mathematically, involving decision variables, an objective function, and constraints.
