Before diving into interview questions, it's essential to understand what chiller systems are and their significance in HVAC (Heating, Ventilation, and Air Conditioning) applications.

What is a Chiller?

A chiller is a machine that removes heat from a liquid via a vapor compression or absorption refrigeration cycle. This cooled liquid is then circulated through a heat exchanger to cool air or equipment as required in large commercial, industrial, or institutional buildings.

Types of Chillers

- Air-cooled Chillers
- Water-cooled Chillers
- Absorption Chillers

Why Chiller Knowledge is Critical in HVAC

Chillers are vital for maintaining controlled environments in large buildings, manufacturing facilities, and data centers. As a technician, understanding their operation, maintenance, and troubleshooting is crucial.
