- Oracle Clusterware: The foundational layer that manages cluster resources, node membership,

and failure handling.

- Voting Disk: Maintains information about cluster node membership; critical for cluster integrity.
- CRS (Cluster Ready Services): Manages resources such as database instances, listeners, and services.

- Database Layer

- Multiple instances (one per node) that access the shared database.
- Uses Oracle Automatic Storage Management (ASM) for efficient shared storage management.

- Shared Storage Infrastructure

- Typically implemented via SAN or NAS solutions.
- Utilizes ASM for managing shared disk resources, ensuring data consistency and high performance.

- Network Layer

- Private interconnects for cluster communication, crucial for data consistency and cache fusion.
