 - Monitor coolant temperature and activate cooling fans or warning lights as needed.

How the Cooling System Operates in the Daewoo Cielo

The cooling process involves a continuous cycle:

- The water pump pulls coolant from the radiator and circulates it through the engine block and cylinder head via internal passages.
- As the coolant absorbs heat from the engine, its temperature rises.
- The thermostat senses this increase and opens when the engine reaches the predetermined temperature (usually around 85-90°C), allowing coolant to flow into the radiator.

- The radiator releases heat from the coolant into the air, aided by airflow and the cooling fan.
- The cooled coolant returns to the engine, maintaining a stable operating temperature.
- The cooling fan activates when the coolant temperature exceeds a certain threshold, ensuring effective heat dissipation even at low speeds.
