Analysis:

This question assesses understanding of particle theory and the relationship between particle arrangement and physical properties.

- Solid: Particles are closely packed in a fixed, orderly arrangement; they vibrate but do not move freely.
- Liquid: Particles are close but not arranged in a fixed pattern; they can flow past each other.
- Gas: Particles are far apart and move randomly at high speeds.

Effect on density:

- Solids: High density due to tightly packed particles.
- Liquids: Moderate density; particles are less tightly packed than in solids.
- Gases: Low density owing to large spaces between particles.

Educational insight:

Understanding this helps students explain phenomena such as why gases are compressible or why solids are rigid, bridging microscopic particle behavior with macroscopic properties.

Example 2: Calculating Electrical Power Dissipation

Question:

"A resistor of resistance $10\ \Omega$ carries a current of 2 A. Calculate the power dissipated in the resistor."

Solution:

Using the power formula:

$$P = I^2 R$$

$$P = (2)^2 \times 10 = 4 \times 10 = 40\ \text{W}$$

Analysis:

This problem tests students' ability to recall and correctly apply the power law in electrical circuits. It emphasizes the importance of understanding units and proper substitution.
