- Setting Parameters:

- Use the control panel to set the amperage (current) according to the electrode size and material.
- Adjust other parameters such as arc force or pulse frequency if applicable.

- Initiating Welding:

- Strike the arc using the chosen method (touch-and-go or lift start).
- Maintain steady hand movement to ensure a consistent weld pool.
- Monitor the arc and adjust the settings if necessary for optimal results.

- Completion:

- Gradually reduce current before finishing the weld to prevent defects.
- Allow the weld to cool naturally.

Important Operational Tips:

- Always start with a lower current setting and increase gradually.
- Use proper shielding gas for TIG welding to protect the weld pool from contamination.
- Maintain a steady hand and consistent speed to achieve a uniform weld bead.
- Avoid overloading the device; adhere to recommended duty cycles (usually 20%-35%).

Understanding the Control Panel and Settings

The manual details the control interface, which typically includes:

- Main Power Switch: Turns the device on or off.
- Ampere Dial/Buttons: Sets the welding current.
- Process Selector: Switches between MMA, TIG, and other modes.
